👤 Citizenship: USA
📍 Graz, Austria

Researcher waith expertise in large-eddy simulation and direct numerical simulation of turbulent boundary layers, jets, and multiphase flows.

Education

2023	**PhD**, *Aerospace Engineering & Mechanics*, University of Minnesota
	Thesis: "High-fidelity unstructured overset simulation of complex turbulent flows" 🔗
	Adviser: Professor Krishnan Mahesh
2020	**MS**, *Aerospace Engineering & Mechanics*, University of Minnesota
2018	**BAEM**, *Aerospace Engineering & Mechanics*, University of Minnesota
	Minors: Math, Astrophysics

Skills

Programming	Fortran, Python, MATLAB, MPI, Make, Shell, Git	*Engineering*	OpenFOAM, SolidWorks, ANSYS, Simulink
Meshing	Pointwise, GridPro, Salome, Gmsh	*Visualization*	ParaView, Tecplot, Blender, PyVista
Office	LaTeX, Microsoft Office	*Manufacturing*	Lathe, mill, waterjet, composites

Experience

2025–Present	**Group Leader: Multiscale CFD**, *Research Center Pharmaceutical Engineering*, Graz, Austria
2023–2024	**Senior Scientist**, *Research Center Pharmaceutical Engineering*, Graz, Austria

- Led the simulation strategy development for an EU Horizon 2020 project.
- Coded a boundary element method from scratch to resolve sub-Kolmogorov-scale droplet breakup.
  - *Discretization*: Unstructured Lagrange 6-point triangular cells, Gauss-Legendre quadrature, feature-preserving adaptive cell refinement, curvature-adaptive Laplacian mesh smoothing.
  - *Numerics*: Adaptive RK2 time stepping, matrix-free GMRES(k), Wielandt eigenvalue deflation, fast multipole method with Green's function singularity subtraction.
  - *I/O*: VTK binary solution files, Gmsh binary grid files, automatic icosahedron grid generation.
- Implemented an ethanol-water mixture model in OpenFOAM to simulate impingement jet mixing.

2018–2023	**Graduate Research Assistant**, *University of Minnesota*, Minneapolis, MN, USA

Computational Fluids Lab (Professor Krishnan Mahesh)

- Performed large-scale ($>$10000 processor) simulations of complex turbulent flows.
  - Derived axisymmetric streamline coordinates to analyze boundary layer curvature effects in a large-eddy simulation (LES) of a turbulent boundary layer on an axisymmetric body.
  - Resolved the trip wires on an appended hull to analyze boundary layer memory effects in LES.
  - Identified mixing-enhancing secondary vortices from direct numerical simulation (DNS) and dynamic mode decomposition (DMD) of a jet in crossflow.
- Extended an in-house unstructured finite-volume overset LES/DNS method in Fortran/MPI.
  - Implemented support for *hypre* GPU solvers with minimized LHS matrix reconstruction.
  - Added non-orthogonal Crank-Nicolson viscous flux correction and LES source terms.
  - Created grid cutting and hierarchy algorithms for overset assembly of complex geometries.

2016–2017 **Undergraduate Research Assistant**, *University of Minnesota*, Minneapolis, MN, USA
Turbulent Shear Flow Lab (Professor Ellen Longmire)
- Designed wax-iron oxide spheres to study particle transport in a turbulent boundary layer.
- Characterized the particle restitution coefficient's Stokes number dependence using high speed cameras and MATLAB image analysis.
- Measured vibrations of a water tunnel traverse system to investigate PIV imaging errors.

2014–2019 **Chief Engineer & Aerodynamics Designer**, *University of Minnesota Formula SAE*
- Designed, simulated, and tested a high-lift aerodynamics package for a single-seater race car.
- Led weekly meetings of a team of 70 members and directed systems-level car design targets.
- Programmed a MATLAB graphical user interface to parameterize multi-element wing profiles.
- Automated large-scale ANSYS CFX simulations at the Minnesota Supercomputing Institute.

Service

2025 Co-organizer of an international workshop at the *Banff International Research Station*: "Particulates across Scales: Mathematical Modeling, Computation, and Applications" ⊠

Mentorship

Graduate Mentorship of an undergraduate student in overset DNS, Tecplot, and GridPro to simulate freely rising/falling particles in six-degree-of-freedom motion.

Undergraduate Training of over 20 Formula SAE team members in SolidWorks, MATLAB, ANSYS, and composites manufacturing.

Awards

2019 John A. & Jane Dunning Copper Fellowship for Aerospace Engineering & Mechanics

2018 Donald & Shirley Gorence Scholarship

2017 Robert H. & Marjorie F. Jewitt Fund Scholarship
